Education

Kongu Engineering College **Sep 2019 – May 2023**

Bachelor of Engineering in Computer Science - Graduated with distinction 8.5 CGPA Erode, Tamil Nadu

Key Achievements

- Led multiple onsite technical workshops and hands-on training sessions for bank IT teams during Fusion Essence implementation, enabling faster system adoption and reducing post–go-live support dependency.
- Collaborated onsite in Zimbabwe for four months to implement the Fusion Essence Core Banking System for ZB Bank, providing end-to-end go-live and post–go-live support.

Professional Experience:

Thoughtscrest Software Private Limited - Technical Consultant **Aug 22 – Aug 23 (Internship)** **Aug 23 – Feb 25 (Full Time)**

Revolving Credit Line Development: Developed and implemented the RCL module as a strategic product enhancement.

- Demonstrated comprehensive expertise across the end-to-end lending lifecycle, including Loan Establishment, Schedule Generation, Repayment, Arrears Management, Settlement, Renegotiation, Restructuring, Collateral, and Commitments, supporting multiple loan products and improving process efficiency and operational stability.
- Enhanced JavaScript for the loan variation screen to dynamically control field behavior and implemented the Charge Accrual feature to ensure accurate financial processing.

Tonik Customization: The client requested the implementation of a feature to calculate a new EIR (Effective Interest Rate) and MIR (Monthly Interest Rate) for newly established loans, generate a revised schedule with updated interest and amortization amounts, and facilitate the transfer of the amortization amount from the suspense account to the P&L account through a batch process.

- A configuration process was created to enable charge amortization for loan sub-products.
- Developed backend components and RESTful services using Spring Boot and Hibernate, following modular and maintainable design principles.
- Another batch process was developed to recalculate EIR and MIR for loans that have availed the holiday repayment.
- Developed Java-based batch processes to amortize suspense account balances to P&L accounts.
- A RESTful API was created to fetch details of the newly generated schedule, EIR, and MIR.

FIB Customization: A new custom adapter has been developed in Essence to accommodate the third-party API to validate whether the transaction is compliant or non-compliant. Based on the response, the custom adapter will reject or approve the transaction in Fusion Payment Manager, which handles SWIFT.

Finastra Software Solutions - Software Engineer **Mar 25 – Current (Contract)**

ZB Implementation: Travelled to the site location to implement the product, identified and addressed gaps between existing business activities and product functionality. Ensured seamless integration with other systems, customized the system to meet the client's specific needs, and provided support to resolve issues encountered during various testing cycles and the product's go-live phase.

- Identified root causes of issues arising from migrations or builds and corrected data wherever necessary.
- Supported the Core Banking system in integrating with third-party applications to meet business objectives.

Islamic Banking Product Team: Successfully forward ported the entire Islamic Banking product from version 5.5.X to the latest 202X release, resolving artefact build issues, addressing version compatibility concerns, and integrating the product with BAW. Additionally, resolved functional issues within the IB product and developed custom processes tailored to specific client requirements.

- Built an automation tool
  - Developed an automation tool using ANT and Scriptella to streamline manual processes in the core banking system.
  - Automated tasks included importing abstract products, creating sub-products for IB, configuring IB setups, and provisioning users.
- Enhanced the existing post-deal “Rate Review” process to support interest-rate amendments based on base codes and fixed-rate structures, integrating the solution with the core banking system’s SOAP APIs.
- Developed new IB products, including Floating Murabaha and Manual Ijara, and integrated them into the existing process flow to enable required business functionality.

Skills

Backend Development: Core Java, OOPs, Multithreading, Spring Boot, Hibernate, Batch Processing, Exception Handling.
API Development & Integration: RESTful APIs, SOAP APIs, JSON, XML, Postman, SOAP UI, Swagger.
Databases: SQL (Oracle/DB2), PL/SQL, Triggers, Joins, DDL, Query Optimization.
Tools & Platforms: Git, GitHub, Git Bash, Eclipse, WinSCP, PuTTY, Microflow, ETL.
Domain Knowledge: Core Banking System, Islamic Banking Fundamentals, Lending Systems, CASA, Loan Lifecycle.
Other Skills: Maven/Gradle, CASA, Lending Life Cycle, System Integration, Unit Testing, Agile Methodologies.
